

EPUMENT[®] Ultralight Flow

Brand new – Excellent damping – Ultralight

- **Brand new:** A completely new lightweight construction material based on epoxy resin, with a special lightweight filler!
- **Excellent damping:** Improves the vibration damping of components with dynamic movement many times over!
- **Ultralight:** Extremely low density of 0.7 g/cm³!

Further benefits

- Filling constructions of welded thin metal sheets with EPUMENT[®] Ultralight Flow makes for easy further processing
- No complex production processes or expensive materials such as carbon-fiber-reinforced plastics are required for lightweight constructions
- Lower costs, shorter throughput times, and great availability
- Outstanding eco credentials – EPUMENT[®] Ultralight Flow consists of over 90 % natural raw materials and cures at room temperature without the need for additional heat
